

**SYSTEMS AND METHODS FOR PULL PRINTING WHERE RENDERING
IS INITIATED AT THE PRINTER**

ABSTRACT OF THE DISCLOSURE

A method for pull printing a document wherein the rendering is initiated at a printer is disclosed. A document on a computing device is located from a printing device. A message is sent to the computing device to print the document with at least one print option. The document is rendered at the computing device into printer ready data using the at least one print option thereby providing a rendered document. The rendered document is de-spooled to the printing device. Another print option is processed on the printing device. The rendered document is printed on the printing device.
